**Subject:** Information for School Committee -BMLD Project

Hi George,

Here is the background information for the School Committee:

*The BMLD is in the process of changing out their old electric meters with new smart meters. One of the advantages of these new meters is their ability to wirelessly transmit electrical usage back to the light department, thus significantly reducing the need for house-by-house meter readings. The light department has requested our assistance, under the Network Service Level Agreement, in setting up the network infrastructure which would aggregate wireless data collectors mounted on several town buildings. Three of those buildings are the Chenery, Winn Brook and Butler schools. Since this joint effort involves school buildings, I wanted to make the Committee aware of the request by the light department to mount data collector on these three schools.*
